A final benefit of participating in JAD sessions is the creative development of designs. IT representatives lend technical advice when it is required, help develop logical models and specifications, and build the prototype. Potential Drawbacks of Using JAD There are three drawbacks or pitfalls that you should also weigh when making a decision on whether to do traditional one-on-one interviews or to use JAD. And because the user themselves designed the system, they immediately adopt. The structured approach provides a good alternative to traditional serial interviews by system analysts. The objective of this phase is to identify the system's high-level requirements and scope. As the project analyst, you should be present during JAD to listen to what users say and what they require. The scribe may ask the facilitator to stop the process whenever necessary to you need to carefully select and include your stakeholders as they will be responsible for the overall success of a JAD session.
