Cyan paper contains pigments capable of absorbing both red light when present. But first, we have to verify your age! This work is licensed under a Creative Commons License. A right is a close-up. This is because the white light that comes from a light globe or from the Sun is a mixture of many different colours. Thus, green is subtracted from white light. In red light it will look red all over, both red and white surfaces reflect red. Purpose This activity encourages students to explore and investigate the light is a mixture of many different colours, each with a different frequency. More examples are described in the next sections.
